

# Antimicrobial Efficacy in Industrial Water Supply

Depending on the environment, the coolant water that is used in industrial facilities may often emit a putrid odor due to the proliferation of bacteria.

By using Zeomic for water treatment, the growth of bacteria and the putrid odor can be anticipated to be controlled.

## Test Method

Sample : Ceramic particulates  
Additive volume : 1g, 10g  
Test fluid volume : 1000mL (industrial water)

Ceramic particulates

## Test Results

Viable bacteria count (cfu/ml)
